

SAVANNA ENERGY SERVICES CORP

DRILLING / WELL SERVICING / OILFIELD SERVICES

Savanna Energy Services Corp. (Savanna) is a premiere North American energy services provider headquartered in Calgary, Alberta.

Savanna's primary offerings include conventional drilling, hybrid drilling, and well servicing and comprehensive oilfield services such as oilfield equipment rental that meet the needs of our diverse oil and gas customer base. Savanna is uniquely positioned in the energy services industry, incorporating Aboriginal partnerships and community involvement with leading technology that includes PLC-controlled service rigs and patented hybrid drilling rigs.

The Heart Lake - Savanna Partnership currently has one service rig in the fleet at 50% Nation ownership with the opportunity for growth. There is interest and capacity to bring excellent, custom rig service to additional clients in Heart Lake Traditional Lands.

Since 2001, Savanna has worked closely with many key Aboriginal communities to develop and maintain strong business relationships. These relationships are genuine business partnerships that benefit Aboriginal communities, Savanna and our oil and gas producing customers.

This model brings Aboriginal communities into the Western Canadian energy industry as meaningful players, not just financial participants. With a record of tangible achievement that no other service company can match, and a commitment to treating our First Nations partners as equals in every respect, Savanna is poised and determined to remain an industry leader in Aboriginal community relations. Working with these communities also provides Savanna with access to a large and capable labour force. Hiring of Aboriginal personnel is based on need, skills and merit, as with all Savanna employees, and Savanna offers a training and mentorship program that helps to develop skills in all prospective employees, with a personal empowerment component for those individuals from our partner communities.

It is gratifying that many Aboriginal communities choose to meet with Savanna to discuss the availability of future partnerships. Based on shared interest and oil and gas customers' support, we see considerable opportunity to expand this model and extend its benefits over other service lines in the coming years.
